

# Dennis Andriesse

da.andriesse@few.vu.nl | <https://mistakenot.net>

## Professional Experience

---

- JAN'17–NOW **Postdoctoral researcher**, *Vrije Universiteit Amsterdam, System and Network Security Group*.  
Research on a wide variety of topics in systems security and network security, including reverse engineering, binary hardening, and compiler-based defenses.
- OCT'16–Nov'16 **Internship (during Ph.D.)**, *Cisco Systems, Amsterdam, Netherlands*.  
Developed an LLVM-based compiler pass which implements type-sensitive forward-edge Control-Flow Integrity (CFI). Used for hardening binaries in a multi-platform operating system that runs on a variety of devices, including network switches.

## Education

---

- 2017 **Ph.D.**, *Vrije Universiteit Amsterdam, System and Network Security Group, cum laude* (highest honor, awarded in approx. 4% of graduations).  
Research on binary-level anti-exploitation techniques, reverse engineering, and malware analysis. Advised by prof.dr.ir. Herbert Bos and co-advised by dr. Asia Slowinska.  
Thesis committee: prof.dr. Andrew S. Tanenbaum, prof.dr. Thorsten Holz, prof.dr. Frank Piessens, dr. Christian Rossow, and dr. Davide Bazarotti. **Winner of Roger Needham Ph.D. Award for best Ph.D. thesis in Computer Systems in Europe.**
- 2012 **M.Sc. Parallel and Distributed Computer Systems**, *Vrije Universiteit Amsterdam, cum laude* (highest honor).  
Research M.Sc. (topmaster) on system and network security, and systems- and parallel programming. Grade average 9.0/10.0 (ECTS grade A, top 3%).
- 2010 **B.Sc. Computer Science**, *Vrije Universiteit Amsterdam, cum laude* (highest honor).  
Grade average 8.9/10.0 (ECTS grade A, top 3%).

### Ph.D. Thesis

- title** *Analyzing and Securing Binaries Through Static Disassembly*
- advisor** prof.dr.ir. Herbert Bos and dr. Asia Slowinska
- description** Thesis deals with safely using error-prone binary analysis techniques to instrument binaries with novel defenses against advanced attacks. Additionally, the thesis provides an in-depth study of the precision and challenging cases in x86/x86-64 disassembly, and discusses an improved technique for function detection in stripped binaries (the most error-prone disassembly primitive at the time of writing).

### M.Sc. Thesis

- title** *A Comparative Analysis of the Resilience of Peer-to-Peer Botnets*
- advisor** prof.dr.ir. Herbert Bos
- grade** 9.5/10 (ECTS grade A, top 1%)
- description** Reverse engineered several peer-to-peer botnets, assessing their resilience against enumeration and sinkholing attacks. Later published at the 2013 IEEE Symposium on Security and Privacy.

### B.Sc. Thesis

- title** *Feasibility of the RFID Guardian as a Relay Attack Platform*
- advisor** dr. Melanie Rieback
- grade** 10/10 (ECTS grade A, top 1%)
- description** Designed and implemented simulated RFID relay attacks to assess their feasibility on the RFID Guardian device.

FEB'15–MAY'15 **Cadet Officer Military Pilot (KOO Officier Vlieger)**, *Royal Military Academy (Koninklijke Militaire Academie)*, Breda, Netherlands.  
Passed selection and started training as military pilot in the Royal Netherlands Air Force. Unable to continue due to family reasons.

## Selected Projects

---

### ***Newton: The Dynamics of Innocent Flesh on the Bone.***

One of the main contributors to Newton, an automatic exploit generation tool based on dynamic taint analysis. Newton was the first tool to show that state-of-the-art defenses against Return-Oriented Programming at the time didn’t hold up against attackers armed with dynamic binary analysis capabilities.

### ***Nucleus: Compiler-Agnostic Function Detection in Binaries.***

Main author of Nucleus, a compiler-agnostic function detector that won a best paper award at EuroS&P 2017 and was partially integrated into Binary Ninja, a well-known commercial disassembler. Nucleus can accurately perform both function start and function boundary detection in binaries, with only minimal assumptions on function or binary layout. It can naturally handle tough cases, such as non-contiguous and indirectly called functions, without any dependence on function signatures. The source is available at <https://bitbucket.org/vusec/nucleus>.

### ***PathArmor: Practical Context-Sensitive CFI.***

Major contributor to PathArmor, the first practical Context-sensitive Control-Flow Integrity (CFI) platform. Earlier CFI implementations, which track control transfers individually, have been demonstrated to leave sufficient leeway for powerful ROP attacks. Context-sensitive CFI improves security by validating control transfers to sensitive program states *within the context of preceding edges*, greatly reducing the number of exploitable program paths available to an attacker. PathArmor is available open-source at <https://github.com/dennisaa/patharmor>.

### ***Operation Tovar: Takedown of the GameOver Zeus Botnet.***

One of the main contributors to Operation Tovar, a large-scale takedown effort against GameOver Zeus (GOZ) in June 2014. At the time, GOZ was widely considered the most advanced Peer-to-Peer botnet. This was a collaboration with the FBI, CrowdStrike, Dell SecureWorks, and Saarland University (Germany). The Peer-to-Peer layer attack evolved in large part from my M.Sc. thesis work.

### ***Parallax: Code Self-Verification Using Return-Oriented Programming.***

Main author of Parallax, a novel code self-verification technique that uses Return-Oriented Programming (ROP) gadgets to protect instructions against tampering. It is the first anti-tampering system that can protect arbitrary code while being immune to attacks against traditional checksum-based tamperproofing. Parallax has grown into an ongoing research project on code self-verification for embedded devices, and has attracted dedicated funding, Ph.D. students and postdocs.

## Awards and Grants

---

- APR'18 Winner of EuroSys Roger Needham Ph.D. Award for best Ph.D. thesis in Computer Systems in Europe
- MAR'18 Nominated for Dutch Cyber Security Research Best Paper Award (top five)
- OCT'17 Best Paper Award (for the paper "The Dynamics of Innocent Flesh on the Bone: Code Reuse Ten Years Later" published at CCS'17), *3rd Cyber Security Workshop in the Netherlands (CSW-NL 2017)*, (Den Haag, The Netherlands), October 2017
- JUNE'17 Awarded the distinction *cum laude* for my Ph.D. thesis, given in approximately 4% of Ph.D. graduations at Vrije Universiteit Amsterdam and requiring unanimous endorsement by my advisor, all five thesis committee members and two external readers
- APR'17 Best Paper Award (for the paper "Compiler-Agnostic Function Detection in Binaries"), *2nd IEEE European Symposium on Security and Privacy (EuroS&P'17)*, (Paris, France), April 2017
- AUG'16 Travel grant, *25th USENIX Security Symposium (USENIX Sec'16)*, (Austin, TX, USA), August 2016
- MAR'16 Nominated for Dutch Cyber Security Research Award (top five)
- JULY'14 FBI Certificate of Recognition for outstanding efforts in the takedown of GameOver Zeus (Operation Tovar)
- JUNE'14 Winner of National Cyber Security Research Agenda (NCSRA) Ph.D. competition

## Reviewing and Organizing

---

- MAY'18–JULY'18 Program committee member, *25th ACM Conference on Computer and Communications Security (CCS'18)*, (Toronto, Canada), October 2018
- MAY'18–JUNE'18 Program committee member, *12th USENIX Workshop on Offensive Technologies (WOOT'18)*, (Baltimore, MD, USA), August 2018
- FEB'18–MAR'18 Program committee member (short track), *38th IEEE International Conference on Distributed Computing Systems (ICDCS'18)*, (Vienna, Austria), July 2018

- Nov'17–JAN'18 Shadow program committee member, *Eurosys 2018*, (Porto, Portugal), April 2018
- OCT'17 Ph.D. evaluation committee member, “Selected x86 Low-level Attacks and Mitigations” by Christian Otterstad, University of Bergen, Norway
- AUG'17 Reviewer, *IEEE Security & Privacy Magazine*, special issue “Hacking Without Humans”
- MAY'17 Reviewer, *Journal of Computer Security*
- SEP'16 Reviewer, *22nd ACM International Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS'17)*, (Xi'an, China), April 2017
- JULY'16 Reviewer, *11th International Conference on Malicious and Unwanted Software (MALCON'16)*, (Fajardo, Puerto Rico), October 2016
- NOV'15 Session chair “Hardening”, *18th International Symposium on Research in Attacks, Intrusions, and Defenses (RAID'15)*, (Kyoto, Japan), Springer, November 2015

## Departmental/University Service

---

- NOV'15 Ph.D. participant in meeting with international commission evaluating research at VU University Computer Science department
- OCT'13 Alumnus participant in meeting with accreditation commission for the M.Sc. program in Parallel and Distributed Computer Systems
- MAR'13 Organized lecture “Dismantling Peer-to-Peer Botnets” at orientation session for prospective VU University students

## Valorization

---

- NOV'17 Our function detector Nucleus was integrated into Binary Ninja, a well-known commercial disassembler
- JUNE'14 Our work on the GameOver Zeus P2P botnet was an important factor that led to the takedown of GameOver Zeus in collaboration with the FBI (Operation Tovar)

## Technical Skills

---

<b>Binary analysis</b>	IDA Pro, Capstone, OllyDbg, Pin, PEBIL, Dyninst, Taint analysis (libdft), Symbolic execution (Triton)
<b>Compilers</b>	gcc, LLVM (including LLVM passes)
<b>Programming &amp; scripting</b>	C/C++, Java, Python, Ruby, Assembly (x86, x64), Lua, PHP, Javascript, (X)HTML/CSS, SQL, $\LaTeX$ , R, Bash, Go
<b>Operating systems</b>	Windows (3.1–10), Linux (Ubuntu, Debian, BackTrack, Mandriva, Fedora, Red Hat), Minix
<b>Parallel programming</b>	MPI, CUDA, OpenCL, Hadoop

## Teaching Experience

---

### Course Organization

- 2017 **Computer and Network Security**, *VU University*, Amsterdam, (M.Sc.).  
Co-organized two-month course (together with prof.dr.ir. Herbert Bos), taught 50% of lectures, created challenges and exam questions.

2014–2016 **Computer Networks Excellence Track**, *VU University*, Amsterdam, (B.Sc.).  
Organized “excellence track” for excellent students in computer networks. Designed, introduced and supervised the assignments that comprise the excellence track.

### Advising/Project Work

- 2017 **Master’s Thesis**, *VU University*, Amsterdam, (M.Sc.).  
Co-supervised Master’s thesis on using hardware branch tracking to implement a shadow stack for the Linux kernel.
- 2017 **Literature Study**, *VU University*, Amsterdam, (M.Sc.).  
Co-supervised individual literature study on the dark web.
- 2016 **Excellence Track Programming Project**, *VU University*, Amsterdam, (B.Sc.).  
Co-supervised five excellence track students programming a large-scale malware analysis system.
- 2016 **Literature Study**, *VU University*, Amsterdam, (M.Sc.).  
Co-supervised individual literature study on botnet C2 channels.
- 2011 **Advanced Programming**, *VU University*, Amsterdam, (B.Sc.).  
Supervised course work for individual students.

### Course Work

- 2012–2017 **Computer and Network Security**, *VU University*, Amsterdam, (M.Sc.).  
Taught lectures, created challenges and exam questions.
- 2013–2017 **Binary and Malware Analysis**, *VU University*, Amsterdam, (M.Sc.).  
Created botnet sinkholing challenge, taught guest lectures.
- 2011–2016 **Computer Networks**, *VU University*, Amsterdam, (B.Sc.).  
Designed and graded assignments, organized excellence track.
- 2014–2014 **Security**, *VU University*, Amsterdam, (B.Sc.).  
Taught guest lectures.
- 2011–2014 **Computer Systems**, *VU University*, Amsterdam, (B.Sc.).  
Supervised practicals.
- 2012 **Internet Programming**, *VU University*, Amsterdam, (M.Sc.).  
Graded assignments.
- 2009–2011 **Data Structures and Algorithms**, *VU University*, Amsterdam, (B.Sc.).  
Taught tutorials.
- 2008–2011 **Introduction to Programming**, *VU University*, Amsterdam, (B.Sc.).  
Supervised practicals.
- 2010 **Online Information Systems**, *VU University*, Amsterdam, (B.Sc.).  
Supervised practicals.
- 2009–2010 **Logical Structures**, *VU University*, Amsterdam, (B.Sc.).  
Taught tutorials.
- 2009 **C/C++**, *VU University*, Amsterdam, (B.Sc.).  
Graded assignments.

## Languages

---

- Dutch** Native.
- English** Fluent.
- Chinese (Mandarin)** Basic working proficiency.
- German** Basic working proficiency.
- French** Elementary proficiency.

## Personal Interests

---

Aviation (PPL pilot, enrolled in modular CPL training at Martinair Flight Academy and working towards Aerobatics Rating)

Physics

Science Fiction

Hiking (primarily in the mountains of Norway)

## References

---

References available upon request.
